Introduction	xv
1 Survey of Small Antenna Theory	1
1.1 Introduction	1
1.2 Small Antenna Parameters	3
1.2.1 Directivity	3
1.2.2 Radiation Efficiency	4
1.2.3 Quality Factor	5
1.2.3.1 Antenna Quality Factor	5
1.2.3.2 Quality Factor for Lumped Circuits	6
1.2.3.3 External and Loaded Q	11
1.2.4 Input Impedance and Matching	12
1.3 Small Antenna Theory	13
1.3.1 Work of Wheeler (1947–1975)	16
1.3.1.1 The Radiation Power Factor	16
1.3.1.2 The Spherical Coil	21
1.3.1.3 Comments	25
1.3.2 Work of Chu (1948)	26
1.3.2.1 Spherical Waves	26
1.3.2.2 Chu Equivalent Circuit	27
1.3.2.3 Maximum Gain Omni-directional Chu Antenna	30
1.3.2.4 Minimum Q Omni-directional Chu Antenna	31
1.3.2.5 Maximum G/Q Omni-directional Chu Antenna	31
1.3.2.6 Horizontally Polarized Omni-directional Chu Antenna	32
1.3.2.7 TE and TM Circularly Polarized Omni-directional Chu Antenna	34
1.3.2.8 Comments	34
1.3.3 Work of Harrington (1960)	35
1.3.3.1 Maximum Gain for a Directional Chu Antenna	35
1.3.3.2 Minimum Q for a Directional Chu Antenna	36
1.3.3.3 Antenna Losses and Efficiency	37
1.3.3.4 Comments	39

X Small Antennas

1.3.4	Work of Collin, Rothschild, and Fante (1964–1969)	39
1.3.4.1	Exact Q for a TM or TE Propagating Chu Antenna	39
1.3.4.2	Exact Q for a TM and TE Propagating Chu Antenna	41
1.3.4.3	Relationship Between Q and Fractional Bandwidth B	43
1.3.4.4	Comments	46
1.3.5	Work of Hansen (1981–2006)	47
1.3.5.1	Closed Form Q for TM or TE Omni-directional Chu Antenna Using Chu RLC Approximation	47
1.3.6	Work of McLean (1996)	48
1.3.6.1	McLean's Exact Q for Chu Antenna Radiating TM_{10} or TE_{10}	49
1.3.6.2	Q for Radiating Equally Excited TM_{10} and TE_{10}	50
1.3.6.3	Exact Q for Chu Antenna Derived from Mode Circuits	51
1.3.6.4	Comments	52
1.3.7	Work of Foltz and McLean (1999)	52
1.3.7.1	Minimum Q for the TM Prolate Chu Antenna	55
1.3.7.2	Comments	56
1.3.8	Work of Thiele (2003)	56
1.3.8.1	Superdirectivity and Q	58
1.3.8.2	Comments	61
1.3.9	Work of Geyi (2003)	62
1.3.9.1	Field-Based Evaluation of Antenna Q	63
1.3.9.2	Reinvestigation of Small Antenna Gain and Q Limitations	64
1.3.10	Work of Best (2003–2008)	68
1.3.10.1	B_V and Antenna Input Impedance	69
1.3.10.2	Exact Q Derived from Maxwell's Equations	71
1.3.10.3	Representing Q as a Function of Antenna Input Impedance	73
1.3.10.4	Fundamental Limitations on B_V	74
1.3.10.5	The Spherical Helix Antenna	76
1.3.11	Work of Kwon and Pozar (2005–2009)	78
1.3.11.1	Gain and Q for a Crossed-Dipole Chu Antenna	80
1.3.11.2	Gain and Q for Dual-Set Chu Antenna (DSCA)	82

1.3.12	Work of Thal (2006–2009)	83
1.3.12.1	Spherical Mode Circuits at the Chu Sphere Surface	84
1.3.12.2	Q Value for the TM_{1m} and TE_{1m} Modes	85
1.3.12.3	Self-Resonant Mode Configurations	88
1.3.12.4	Thal's Energy Lower Bound on the Mode Coupling Network	93
1.3.12.5	Applications of the Energy Lower Bound	96
1.3.13	Work of Gustafsson (2007)	97
1.3.13.1	Limitations on Small Antenna Gain- Bandwidth Product and D/Q Ratio	98
1.3.13.2	Applications of the Gustafsson Limits	100
	References	104
2	Fundamental Limits and Design Guidelines for Miniaturizing Ultra-Wideband Antennas	107
2.1	Introduction	107
2.2	Overview of Fano-Bode Theory	108
2.3	Fano-Bode Limit for the Band-Pass Response	112
2.4	Fano-Bode Limit for the High-Pass Response	113
2.5	Antenna Miniaturization	117
2.5.1	Concept	117
2.5.2	Dipole Antenna Example	118
2.6	Broadband Antenna Miniaturization	121
2.6.1	Optimal Miniaturization Factor	122
2.6.2	Loading Profile	123
2.6.3	Equal LC Loading	127
2.7	Conclusion	127
	References	128
3	Overview of Small Antenna Designs	131
3.1	Introduction	131
3.2	Miniaturization via Shaping	132
3.2.1	Slot Loading	134
3.2.2	Bending and Folding	136
3.2.3	Space-Filling Curves	141
3.2.4	Meander Line Antennas	141
3.2.5	Fractal Antennas	143
3.2.6	Volumetric Antennas	149
3.2.7	Radio Frequency Identification Device Antennas	151
3.2.8	Small Ultra-Wideband Antennas	153
3.2.9	Lumped Loading	156

3.3	Miniaturization via Material Loading	160
3.3.1	Dielectric Materials	162
3.3.2	Magnetic Materials	167
3.3.3	Polymer Ceramic Material	170
3.4	Optimization Methods	180
3.4.1	Introduction	180
3.4.2	Genetic Algorithm	180
3.4.3	Particle Swarm Optimization	185
3.5	Antennas on Electromagnetic Bandgap Ground Planes	188
3.5.1	Performances Enhancement via Surface-Wave Suppression	189
3.5.2	Low-Profile Antennas on EBG Ground Plane ...	190
3.5.3	Wideband EBG Design	195
	References	199
4	Antenna Miniaturization via Slow Waves	209
4.1	Introduction	209
4.2	Miniaturization Factor	210
4.3	Basic Antenna Miniaturization Concept	211
4.3.1	Phase Coherent Radiation Conditions	211
4.3.2	Equivalent Transmission Line (TL) Model of an Antenna	212
4.3.3	Artificial Transmission Line (ATL) of Antennas	213
4.4	Antenna Miniaturization Examples	220
4.4.1	Two-Wire Loop Antenna	220
4.4.2	Antenna Miniaturization by Increasing Shunt Capacitance	222
4.4.2.1	Dielectric Loaded Patch Antenna	222
4.4.3	Antenna Miniaturization by Increasing ATL Series Inductance	224
4.4.3.1	Slotted Patches	224
4.4.3.2	Spiral with Coiled Arms	226
4.4.4	Antenna Miniaturization by Increasing both ATL Series Inductance and Shunt Capacitance	227
	References	231
5	Spiral Antenna Miniaturization	233
5.1	Spiral Antenna Fundamentals	233
5.1.1	Basic Planar Spiral Antenna Geometry	233
5.1.2	Spiral Radiation	235
5.1.3	Input Impedance	236
5.1.4	Radiation Patterns	237
5.1.5	Radiation Phase Center	239
5.2	Truncation Effect in Finite Spiral Antennas	241

5.3	Spiral Antenna Backed with a PEC Ground Plane	244
5.4	Spiral Antenna Miniaturization Using Slow Wave Treatments	247
5.5	Spiral Miniaturization Using Dielectric Material Loading (Shunt Capacitance)	249
5.6	Spiral Antenna Miniaturization Using Inductive Loading (Series Inductance)	254
5.6.1	Planar Inductive Loading	254
5.6.2	Volumetric Inductive Loading	257
5.7	Fabricated Miniature Spiral Antennas	259
	References	265
6	Negative Refractive Index Metamaterial and Electromagnetic Band Gap Based Antennas	269
6.1	Introduction	269
6.2	Negative Refractive Index Metamaterials	270
6.2.1	Propagation in ($\epsilon < 0$, $\mu < 0$) Media	270
6.2.2	Circuit Model of ($\epsilon < 0$, $\mu < 0$) Media	273
6.2.3	Composite Circuit Model for the NRI-TL Medium	275
6.3	Metamaterial Antennas Based on NRI Concepts	277
6.3.1	Leaky Wave Antennas	278
6.3.2	Miniature and Multi-band Patch Antennas	287
6.3.3	Compact and Low-Profile Monopole Antennas	291
6.3.4	Metamaterial-Inspired Antennas	296
6.4	High-Gain Antennas Utilizing EBG Defect Modes	300
	References	306
7	Antenna Miniaturization Using Magnetic Photonic and Degenerate Band Edge Crystals	309
7.1	Introduction	309
7.2	Slow Wave Resonances of MPC and DBE Crystals	311
7.3	High Gain Antennas Embedded Within Finite Thickness MPC and DBE Crystals	313
7.3.1	Transmission Characteristics of Finite Thickness MPCs	313
7.3.2	Dipole Performance Within Magnetic Photonic Crystal	317
7.3.3	Resonance and Amplitude Increase Within DBE Crystals	320
7.3.4	Dipole Performance Within Degenerate Band Edge Crystal	321
7.3.5	Practical Degenerate Band Edge Antenna Realizations	325

7.4	Printed Antenna Miniaturization via Coupled Lines Emulating Anisotropy	332
7.4.1	Antenna Miniaturization Using Degenerate Band Edge Dispersion	332
7.4.2	Realizing DBE Dispersion via Printed Circuit Emulation of Anisotropy	336
7.4.3	DBE Antenna Design Using Dual Microstrip Lines	339
7.4.4	Coupled Double Loop Antennas	346
7.4.5	Printed MPC Antennas on Biased Ferrite Substrates	350
7.5	Platform/Vehicle Integration of Metamaterial Antennas	354

8	Impedance Matching for Small Antennas Including Passive and Active Circuits	361
8.1	Introduction	361
8.2	Passive Narrowband Matching	362
8.2.1	Dipole	364
8.3	Passive Broadband Matching	368
8.3.1	Broadband Planar Dipole	369
8.3.2	Inverted Hat Antenna	372
8.4	Negative Matching	374
8.4.1	Loop Antenna	374
8.4.2	Flare Dipole	380
8.5	Concluding Comments	385
	References	387
9	Antennas for RFID Systems	389
9.1	Historical Background	389
9.2	Basic Operation of RFID Systems	393
9.2.1	Tag Categories	393
9.2.2	Passive Radio Frequency Identifications	394
9.2.2.1	RFID Microchip	395
9.2.2.2	Impedance Matching	398
9.2.2.3	RFID Radar Cross Section	399
9.3	Radio Frequency Identification Antennas	400
9.3.1	Meander-Line Dipoles	400
9.3.2	Patch Antennas	401
9.3.3	Fractal Antennas	401
9.3.4	Planar Antennas	404
9.3.5	Slot Antennas	404
9.4	RFID Power Harvesting—Rectennas	405
