	<i>Acknowledgments</i>	<i>xix</i>
	<i>Introduction</i>	<i>xxi</i>
Chapter 1	The SQL Server 2005 Environment and Tools	1
	SQL Server 2005 Tools	2
	SQL Server Configuration Manager	3
	SQL Server Management Studio	6
	SQLCMD Utility	11
	SQL Server Profiler	12
	The Help Subsystem and SQL Server Books OnLine	12
	Basic Operations in Management Studio	13
	What Are Stored Procedures?	14
	Execution of Stored Procedures in Management Studio	14
	Editing Stored Procedures	17
	Creating Stored Procedures	18
	Editing Stored Procedures in the Query Window	19
	Syntax Errors	22
	Viewing and Editing Tables	23
	Changing Table Structure	26
Chapter 2	Stored Procedure Design Concepts	27
	Anatomy of a Stored Procedure	28
	Composition	28
	Functionality	31
	Syntax	38
	Types of Stored Procedures	40
	Managing Stored Procedures	41
	Listing Stored Procedures	41
	Viewing Code of Stored Procedures	43

	Renaming Stored Procedures	44
	Deleting Stored Procedures	45
	Listing Dependent and Depending Objects	45
	The Role of Stored Procedures in the Development of Database Applications	47
	Enforcement of Data Integrity	47
	Consistent Implementation of Complex Business Rules and Constraints	48
	Modular Design	48
	Maintainability	48
	Reduced Network Traffic	49
	Faster Execution	49
	Enforcement of Security	49
Chapter 3	Basic Transact-SQL Programming Constructs	51
	T-SQL Identifiers	52
	Database Object Qualifiers	54
	Data Types	55
	Character Strings	57
	Unicode Character Strings	58
	Date and Time Data Types	59
	Integer Numbers	60
	Approximate Numbers	61
	Exact Numbers	62
	Monetary Data Types	62
	Binary Data Types	63
	Special Data Types	64
	Transact-SQL User-defined Data Types	67
	Variables	68
	Local Variables	69
	Global Variables	73
	Table Variables	76
	Flow-control Statements	77
	Comments	78
	Statement Blocks: Begin...End	80
	Conditional Execution: The If Statement	81
	Looping: The While Statement	86
	Unconditional Execution: The GoTo Statement	89
	Scheduled Execution: The WaitFor Statement	90

	Cursors	91
	Transact-SQL Cursors	92
	Cursor-related Statements and Functions	95
	Problems with Cursors	97
	The Justified Uses of Cursors	97
Chapter 4	Functions	101
	Using Functions	102
	In Selection and Assignment	102
	As Part of the Selection Criteria	103
	In Expressions	103
	As Check and Default Constraints	104
	Instead of Tables	104
	Types of Functions	105
	Scalar Functions	106
	Rowset Functions	136
Chapter 5	Composite Transact-SQL Constructs: Batches, Scripts, and Transactions	143
	Batches	144
	Using Batches	145
	Batches and Errors	146
	DDL Batches	150
	Self-sufficient Content	151
	Scripts	152
	Database Scripting	152
	Transactions	155
	Autocommit Transactions	155
	Explicit Transactions	157
	Implicit Transactions	158
	Transaction Processing Architecture	159
	Nested Transactions	160
	Named Transactions	165
	Savepoints	165
	Locking	169
	Distributed Transactions	173
	Typical Transaction-related Problems	175

Chapter 6	Error Handling	179
	Raiserror()	180
	Using Error Handling	183
	Why Bother?	183
	Error Handling Based on @@Error	184
	Error Handling Architecture: Based on @@Error	186
	Try - Catch Statement	186
	What Errors Are Trapped	187
	Functions of the Catch Block	190
	Try - Catch Statement with Explicit Transactions	191
	Deadlocks	194
	Deadlock Retries	194
	Try - Catch Statement Nesting	198
	Error Handling Architecture: With Try - Catch Statements	199
	Xact_Abort	199
	Error Handling Architecture: Based on Set Xact_Abort On	201
	Error Handling Architecture: Xact_Abort + No Transaction Nesting	205
Chapter 7	Special Types of Stored Procedures	213
	User-defined Stored Procedures	214
	System Stored Procedures	214
	CLR Stored Procedures	216
	Extended Stored Procedures	216
	Design of Extended Stored Procedures	217
	Registering the Extended Stored Procedure	222
	Temporary Stored Procedures	223
	Global Temporary Stored Procedures	224
	Remote Stored Procedures	225
Chapter 8	Views	227
	Design of Standard SQL Views	228
	Syntax	229
	Design View in Enterprise Manager	230
	Security	230
	Standard SQL Views in Execution Plans	231
	Limitations of Views	232
	Editing Data Using Views	233

Dynamic Views	234
Temporary Views — Common Table Expressions	234
Limitations of Nonrecursive CTEs	235
Recursive CTEs	236
INFORMATION_SCHEMA Views	237
Indexed Views	239
Indexed View Limitations	239
Indexed Views in Execution Plans	240
Nonclustered Indexes on Views	241
Performance Implications	241
Partitioned Views	241
Horizontal and Vertical Partitioning	241
Distributed Partitioned Views	244
Execution Plans of Distributed Partitioned Views	248
Updateable Distributed Partitioned Views	253
Scalability and Performance of Distributed Systems	255
A Poor Man's Federated Server	255
Using SQL Views	256
Export and Import	256
Security Implementation	256
Reduce Complexity	257
Performance Improvement	259
Chapter 9 Triggers	261
DML Triggers	262
Physical Design of After Triggers	262
Inserted and Deleted Virtual Tables	264
What Triggers a Trigger?	266
Full Syntax of After Triggers	267
Handling Changes on Multiple Records	270
Nested and Recursive Triggers	272
After Trigger Restrictions	272
Instead-of Triggers	274
Triggers on Views	275
DML Trigger Order of Execution	278
DDL Triggers	279
Scope and Events of DDL Triggers	280

	EventData()	281
	Syntax of DDL Triggers	283
	Managing Triggers	283
	Managing DML Triggers in Management Studio	283
	Managing DDL Triggers from Management Studio	284
	Managing Triggers Using Transact-SQL Statements	284
	Trigger Design Recommendations	289
	Go Out ASAP	289
	Make It Simple	290
	Divide and Conquer	290
	Do Not Use Select and Print Inside a Trigger	290
	Do Not Use Triggers at All	291
	Transaction Management in Triggers	291
	Using Triggers	292
	Cascading Deletes	294
	Aggregates	296
	Enforce Schema Integrity Among Objects on Different Servers or Databases	299
Chapter 10	User-defined Functions	303
	Design of Scalar User-defined Functions	304
	Side Effects	306
	Use of Built-in Functions	306
	Encryption	307
	Schema-binding	307
	Table-valued User-defined Functions	308
	Inline Table-valued User-defined Functions	311
	Managing User-defined Functions in Management Studio	313
Chapter 11	Fundamentals of .NET Programming in SQL Server 2005	315
	Unmanaged vs. Managed Code	316
	Common Language Runtime (CLR)	316
	CLR Integration in SQL Server 2005	318
	Pros and Cons	318
	Supported and Not Supported	319
	Minimally Required Namespaces	320
	Development, Deployment, and Usage of CLR Database Objects in Visual Studio 2005	320
	Development and Deployment of CLR Database Objects Without Visual Studio 2005	324
	Develop Code	325
	Compile Program	326

	Load Assembly to SQL Server Database	328
	Create SQLCLR Database Objects	329
	Cataloging Assemblies and CLR Database Objects	330
	Cataloging Assemblies	330
	Cataloging Procedures	332
	Version of .NET Framework	332
Chapter 12	Fundamentals of CLR Stored Procedure Development	335
	Structure of a CLR Stored Procedure	336
	Database Access from CLR Procedures	337
	CLR Data Types Mapping	338
	Basic Operations with Stored Procedures	339
	Returning Value	339
	Connection Context	340
	Returning a Result	341
	Returning Custom Records	343
	Parameters in CLR Stored Procedures	346
	Operations with Regular ADO.NET Objects	346
	SqlCommand	346
	SqlDataReader	348
	Managing LOB Parameters	349
Chapter 13	CLR Functions and Triggers	355
	CLR Functions	356
	Scalar-valued CLR Functions	356
	SqlFunction Attribute	359
	Table-valued CLR Functions	360
	CLR Triggers	372
	Supported Features	373
	Creation of DML Triggers	373
	Creation of DDL Triggers	379
Chapter 14	CLR Database Objects Advanced Topics	385
	CLR User-defined Types	386
	Structure of Managed UDT	386
	Deploying CLR UDT Without Visual Studio 2005	395
	Using CLR User-defined Types	395
	Cross-database CLR User-defined Types	403

	To UDT or Not to UDT	403
	User-defined Aggregate CLR Functions	404
	Structure of Managed Aggregates	404
	Transactions in CLR Code	416
	Using TransactionScope Class	417
	Transaction Options	419
	Distributed Transactions	420
	Explicit Transactions	423
	Benefits of New Transaction Paradigm	424
	To CLR or Not to CLR (Design and Performance Considerations)	425
	Don't Say I Didn't Warn You	426
Chapter 15	Advanced Stored Procedure Programming	427
	Dynamically Constructed Queries	428
	Executing a String	428
	Query by Form	430
	Data Script Generator	432
	Using the sp_executesql Stored Procedure	437
	Security Implications	439
	Optimistic Locking Using timestamp Values	443
	timestamp	444
	TSEqual() Function	446
	Full-text Search and Indexes	446
	Nested Stored Procedures	448
	Using Temporary Tables to Pass a Recordset to a Nested Stored Procedure	449
	Using a Cursor to Pass a Recordset to a Nested Stored Procedure	451
	How to Process the Result Set of a Stored Procedure	453
	Using Identity Values	459
	A Standard Problem and Solution	459
	Identity Values and Triggers	460
	GUIDs	462
	A While Loop with Min() or Max() Functions	464
	Looping with sp_MSForEachTable and sp_MSForEachDb	466
	Property Management	467
Chapter 16	Debugging	471
	What Is a "Bug"?	472
	The Debugging Process	472

Identification	473
Resolution	474
Debugging Tools and Techniques	475
Transact-SQL Debugger in Visual Studio 2005	476
Debugging CLR Database Objects	480
Poor Man's Debugger	484
Execution in the Production Environment	488
Nested Stored Procedures	488
Output Clause	488
SQL Profiler	490
Using SQL Profiler	490
Typical Errors	494
Handling Null	495
Assignment of Variable from the Result Set	495
No Records Affected	496
Wrong Size or Data Type	496
Default Length	496
Rollback of Triggers	497
Warnings and Lower-priority Errors	497
Return Codes vs. Raiserror	498
Nested Comments	498
Deferred Name Resolution	498
Cursors	499
Overconfidence	499
Chapter 17 Source Code Management	501
Introduction to Microsoft Visual SourceSafe	502
Administering the Visual SourceSafe Database	504
Adding Database Objects to Visual SourceSafe in Visual Studio .NET	505
Managing Create Scripts in Visual Studio .NET	507
Visual SourceSafe Explorer	509
History	510
Labels and Versions	511
Adding Database Objects to Visual SourceSafe: Traditional Approach	513
Creating Scripts Using Script Wizard	513
Creating Scripts Using TbdBScript	516
Putting Scripts to Visual SourceSafe Using TbDir2Vss.vbs	517

Chapter 18	Database Deployment	519
	Deployment of a Complete Database: Traditional Approach	521
	Detach and Reattach the Database in Transact-SQL	521
	Attach and Detach in Management Studio	522
	Backup and Restore	523
	Potential Problems	523
	Deployment of Individual Objects	525
	Deployment Scripts: Traditional Approach	525
	Scripting Data: Traditional Approach	525
	Scripting Data in Visual Studio .NET	526
	Deploying Scripts: Traditional Approach	527
	Deploying Create Scripts in Visual Studio .NET	535
	Incremental Build: Traditional Approach	537
	Incremental Build in Visual Studio .NET	538
Chapter 19	Security	539
	Security Architecture	540
	Authentication and Authorization	540
	Principals	540
	Securables	541
	Access Levels	542
	Roles	546
	Ownership Chains	549
	Cross-database Ownership Chains	549
	Switching of Execution Context	550
	Implementing Security	551
	Selection of Authentication Mode	551
	Managing Logins	552
	Granting Database Access	554
	Assigning Permissions	556
	Synchronization of Login and Usernames	559
	Managing Application Security Using Stored Procedures, User-defined Functions, and Views	562
	Managing Application Security Using a Proxy User	565
	Managing Application Security Using Application Roles	565
Chapter 20	Stored Procedures for Web Search Engines	567
	Characteristics of the Environment	568
	A Simple Solution...	568

... and Its Disadvantages	570
Available Solutions	571
Result Splitting	572
Quick Queries	581
Advanced Queries	585
Fancy New Solution: Row Versioning	589
Chapter 21 Interaction with the SQL Server Environment	597
Running Programs	598
Running Windows Script Files	599
Execution of OLE Automation/COM Objects	600
Data Type Conversion	603
Running SQL Server 2005 Integration Services (SSIS) Packages	604
Running DTS Packages	604
Running/Looping Through DTS Packages	604
Interacting with the NT Registry	606
xp_regread	607
xp_regwrite	608
Jobs	608
Administration of Jobs	608
An Alternative to Job Scheduler	614
Stored Procedures for Maintaining Jobs	614
Operators and Alerts	617
E-mail	618
Database Mail	619
Configuring Database Mail	619
Sending E-mails	621
Check Status	622
Exposing Stored Procedures As Web Services	622
Endpoints	623
Appendix A Naming Conventions	625
Why Bother?	626
Naming Objects and Variables	627
Entity Description	627
Name Length	628
Abbreviations	629
Name Formatting	630

	Suggested Convention	630
	Variables	630
	Database Objects	632
	Triggers	633
	Stored Procedures	634
Appendix B	Stored Procedure Compilation, Storage, and Reuse	637
	The Compilation and Execution Process	638
	Parsing	638
	Get Statistics	638
	Compilation	639
	Execution	639
	Reuse of Execution Plans	639
	Levels of Execution Plans	640
	Caching Levels	640
	Reuse of Query Execution Plans	641
	Parameterized Queries	641
	Autoparameterization	641
	Reuse of Stored Procedure Execution Plans	644
	Recompiling Stored Procedures	646
	Storing Stored Procedures	648
Appendix C	Data Types in SQL Server 2005	651
	Index	655
